

Nordec Environmental Policy

Our history spans decades of designing, manufacturing, and installing frame structures, envelopes, and bridges for the most demanding construction projects. In line with our values, we recognize our responsibility and are committed to continual improvement of our environmental performance.

Scope and compliance: We are committed to meeting legislative and client environmental compliance obligations in our operations, business units, and functions across all the countries we operate in. We co-operate with our suppliers and subcontractors to foster shared progress and advance environmental best practices throughout the value chain.

Partnering with our clients: We support our clients' environmental and sustainability objectives by providing transparent data, including life cycle assessments and environmental product declarations, and by collaborating to deliver products and solutions with reduced environmental impact.

We are committed to protecting the environment, ecosystems, biodiversity and preventing pollution:

- **Climate change mitigation:** Our goal is to reduce our greenhouse gas emissions by offering low-carbon solutions. We strive to improve our energy efficiency and increase the share of renewable energy sources.
- **Climate adaptation:** We assess climate-related risks and plan measures that support operational resilience.
- **Reducing harmful emissions:** We aim to reduce volatile organic compound (VOC) and nitrogen oxides (NOx) emissions in co-operation with our suppliers.
- **Responsible sourcing:** We consider environmental impacts when choosing products and services, seeking more sustainable options and promoting sustainable resource use.
- **Circularity:** We reduce environmental impacts throughout the building lifecycle by improving resource efficiency, designing for longevity and structural flexibility, enabling future modifications and structural reuse. We aim to increase the share of recycled steel and to develop solutions based on reused steel.
- **Minimizing waste to landfill:** We handle all waste responsibly, maximizing reuse and recycling.

Delivering on our promises

- **Leadership:** The management group has established this policy, sets environmental targets, reviews progress annually and ensures mandates and resources for effective implementation.
- **Accountability:** Each business unit and function plays a role in the implementation of the policy and related action plans, and in contributing toward achieving our environmental targets. All personnel are informed how to apply the policy in their work, clarifying role-specific tasks and responsibilities.
- **Pursuing environmental excellence together:** The policy is communicated to all stakeholders. We collaborate with our partners, suppliers, subcontractors and clients to share achievements and lessons learned, set supplier standards and offer solutions that deliver measurable environmental benefits.
